

Table 1: Average long-term forecasting results on the benchmark datasets. We followed the same setting in DMMV [Shen et al., 2025]. Lower MSE and MAE indicate better performance. We set the forecasting horizons $H \in \{24, 36, 48, 60\}$ for Illness and $\{96, 192, 336, 720\}$ for the others. **Red**: the best, Blue: the second best. More results are in Appendix B.
