

Table 16: Zero-shot length generalization of RDTU. Models trained only up to  $H = 336$  under the 5% data regime are directly evaluated on  $H = 720$  without additional training, and are compared with RDTU trained on  $H = 720$  using 10% data.

| Dataset | Metric    | RDTU Trained on $H = 336$ w/ 5% Data, Eval on $H = 720$ | RDTU Trained on $H = 720$ w/ 10% Data |
|---------|-----------|---------------------------------------------------------|---------------------------------------|
| ETTh1   | MSE / MAE | 0.705 / 0.598                                           | 0.694 / 0.587                         |
| ETTh2   | MSE / MAE | 0.442 / 0.456                                           | 0.425 / 0.443                         |
| Traffic | MSE / MAE | 0.478 / 0.337                                           | 0.463 / 0.325                         |
